**TO:** File

---

**BASIC INFORMATION**

**Facility Name:** Container Life Cycle Management LLC, d/b/a/ Mid-America Steel Drum Company,

**Facility Location:** 3950 South Pennsylvania Avenue, St. Francis, Wisconsin

**Date of Inspection:** August 30, 2017

**EPA Inspector(s):**

1. Manojkumar P. Patel, Environmental Engineer

**Purpose of Inspection:** Compendium Method EPA TO-15 Air Sampling around the facility

**Facility Type:** Industrial Plastic and Metal container reconditioning operations

**Regulations Central to Inspection:** Wisconsin State Implementation Plan requirements and Clean Air Act

**Arrival Time:** 8:10 AM

**Departure Time:** 5:20 PM

**Inspection Type:**

- Off-Property Air Sampling  
 Announced Inspection

$M_{\text{H}_2}V = 1.3 \pm 0.1$

## **OPENING CONFERENCE**

Not applicable

**Company Ownership:** Not applicable

### **Process Description:**

Container Life Cycle Management LLC d/b/a Mid-America Steel Drum Company (the facility), is located at 3950 South Pennsylvania Avenue, St. Francis, Wisconsin. The facility receives metal and plastic used containers from several industrial and commercial establishments and cleans the containers in a series of washing and rinsing steps with hot water and caustics. Drums are then quality inspected and shot blasted; painted on the its exterior surfaces; and cured in the baking oven before being sent to the end industrial users. Hot water, caustics, acids, and any remaining waste from the containers are collected and processed through the wastewater treatment plant on-site; Vapors from the washing and rinsing stations are sent to the common header, and then to the atmosphere via a caustic scrubber.

**Staff Interview:** None

## **TOUR INFORMATION**

**EPA toured the facility:** No

### **Data Collected and Observations:**

EPA detected strong solvent-like odors from the exhaust vent in the building wall from the property wall on the Norwich Avenue. EPA took field measurements around the facility.

**Photos and/or Videos:** were taken during the inspection.

**Field Measurements:** were taken during this inspection.

- EPA took its first air sample at Site 1 ( $42^{\circ} 58' 19''$  N,  $-87^{\circ} 52' 47''$  W) at 8:40 AM CST with the initial pressure of sampling canister at 30 PSI. Station 1 air sampling ended at 4:20 PM CST with the pressure gauge reading at 2 PSI.
- EPA took its second air sample at Site 2 ( $42^{\circ} 58' 19''$  N,  $-87^{\circ} 52' 45''$  W) at 8:45 AM CST with the initial pressure of sampling canister at 30 PSI. Station 2 air sampling ended at 4:25 PM CST with the pressure gauge reading at 3 PSI.
- EPA took its third air sample at Site 3 ( $42^{\circ} 58' 18''$  N,  $-87^{\circ} 52' 39''$  W) at 8:50 AM CST with the initial pressure of sampling canister at 29 PSI. Station 3 air sampling ended at 4:10 PM CST with the pressure gauge reading at 4 PSI.

- EPA took its fourth air sample at Site 4 ( $42^{\circ} 58' 18''$  N,  $-87^{\circ} 52' 39''$  W) at 8:55 AM CST with the initial pressure of sampling canister at 29 PSI. Station 4 air sampling ended at 4:10 PM CST with the pressure gauge reading at 2 PSI.
- EPA took its fifth air sample at Site 5 ( $42^{\circ} 58' 18''$  N,  $-87^{\circ} 52' 36''$  W) at 9:02 AM CST with the initial pressure of sampling canister at 29 PSI. Station 5 air sampling ended at 4:30 PM CST with the pressure gauge reading at 4 PSI.
- EPA took its sixth air sample at Site 6 ( $42^{\circ} 58' 18''$  N,  $-87^{\circ} 52' 30''$  W) at 9:10 AM CST with the initial pressure of sampling canister at 29 PSI. Station 6 air sampling ended at 4:35 PM CST with the pressure gauge reading at 3 PSI.
- EPA took its seventh air sample at Site 7 ( $42^{\circ} 58' 16''$  N,  $-87^{\circ} 52' 46''$  W) at 9:20 AM CST with the initial pressure of sampling canister at 26 PSI. Station 7 air sampling ended at 4:45 PM CST with the pressure gauge reading at 6 PSI.
- EPA took its eighth air sample at Site 8 ( $42^{\circ} 58' 22''$  N,  $-87^{\circ} 52' 46''$  W) at 9:30 AM CST with the initial pressure of sampling canister at 29 PSI. Station 8 air sampling ended at 4:40 PM CST with the pressure gauge reading at 5 PSI.
- EPA took its ninth air sample at Site 9 ( $42^{\circ} 58' 11''$  N,  $-87^{\circ} 52' 44''$  W) at 9:37 AM CST with the initial pressure of sampling canister at 30 PSI. Station 9 air sampling ended at 4:50 PM CST with the pressure gauge reading at 4 PSI.
- See Appendix A for the Chain of Custody Record.
- See Appendix B for the detailed final air sampling laboratory report.

Laboratory Report.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
REGION 5 CHICAGO REGIONAL LABORATORY  
536 SOUTH CLARK STREET  
CHICAGO, ILLINOIS 60605

Date: 11/3/2017

Subject: Review of Region 5 Data for Mid America Steel Drum, Inc.

To: RCRA, LCD, US EPA Region 5  
77 West Jackson Boulevard  
Chicago, IL 60604

From: Wayne Whipple, Chemist  
US EPA Region 5 Chicago Regional Laboratory

The data transmitted under this cover memo successfully passed CRL's data review procedures as documented in the current Quality Management Plan and applicable Standard Operating Procedures. In accordance with the EPA QA/G-8 *Guidance on Environmental Data Verification and Data Validation* and the U.S. EPA Region 5 RMD QMP, CRL performs data verification on all the data generated internally. CRL does not perform data validation or quality assessment procedures.

This report was reviewed and the information provided herein accurately represents the analysis performed.

### **Analysis Case Narrative for Volatile Organic Compounds (VOC) Air Toxics**

Wayne J. Whipple, Ph.D.  
phone (312) 353-9063  
email [whipple.wayne@epa.gov](mailto:whipple.wayne@epa.gov)

#### **General Information:**

Nine 3.2 L canisters were received on 18 June, 2017 in good condition. The samples were analyzed within the 30 day holding time.

Samples were analyzed using the CRL SOP MS005 ver 2 with Pen and Ink 8327, 9436 and 9102 which allows for the use of the new Entech 7200 Preconcentrator and 7650 Robotic arm for sample analysis and an extended list of target compounds and clarifies a discrepancy between analytical and data review SOPs with the ICV recoveries.

The project objectives were to quantify target analytes and the presence of any other high concentration analytes detectable by this laboratory's SOP that is based on the TO-15 analysis. Data verification was performed and the data is acceptable to use for this purpose.

Preliminary results were sent on July 28, 2017. There are no significant changes to the preliminary data target analytes that have been reported except for adjusted reporting limits and data qualifiers.

Data are reported to the reporting limit.

#### **Sample Analysis and Results:**

Samples were received and the initial pressure was recorded in each canister. No actual dilutions were performed on the canisters but each rerun (-RE#) contained a smaller volume of sample processed for analysis thereby reducing the amount added to the instrument. The amount processed was 100 cc (normal 200cc) for the higher volume injections and 20 cc injections for the lower injection volumes. Adjustments were made to the reporting limits analogous to dilutions.

Acetone in samples 1707033-03RE1 and -04RE1 is above the highest concentration in the calibration curve and is flagged as estimated, "J".

The standard used for this analysis was the Air Liquide that has less analytes than the routine primary standard. Many of the oxygenated aldehydes and other compounds were not quantified because of the difference. The original routine primary standard has since expired and will be recertified. (The company is in Miami and a hurricane hit when the recertification was due.)

The ethanol result for the duplicate sample has been rejected because it was a 0 value calculated from outside the limit of the quadratic calibration curve.

A review of all the sample chromatograms analyzed at the larger injection volume showed only two significant peaks in sample 1708033-08 and 1708033-09 where a larger peak was tentatively identified as nonanal with a concentration estimate of about 2 ppbv in sample -08. Sample -09 had a smaller peak so the semi quantitation was not performed. If more detailed information is needed please contact the laboratory.

#### **Quality Control:**

The "TUN" qualifier is added to all the samples because 5 of the 9 calibration samples were analyzed outside of the tune check window. A tune check was performed immediately after the last calibration standards analyzed and the tune passed. This error is documented in a nonconformance report included in this package (12045). All samples and batch QC were analyzed with a proper tune check. This error is not expected to have a significant effect on the data quality since the final calibration tune check passed.

Project: Mid America Steel Drum, Inc.  
Project Number: [none]  
Project Manager: Jamie Paulin

Reported:  
Nov-03-17 11:30

The method blank was found to be low in concentration because of a sequence error where 0 ccs were selected to collect compared to the 200 ccs. A non-conformance (11670) was created. The method blanks collected from the same canister fill are reproducible within the precision of the analysis so the following batch method blank is included in this data package. The 0 cc blank, or instrument blank, showed no signs of unexpected system contamination. The compounds detected in the following analytical batch method blank are propene (42.59 pptv), Acrolein (61.23 pptv), Acetone (521.86 pptv), and 2-butanone (44.38 pptv). These specific compound results reported in this data set may have been affected by system contamination if the result is within 5 times the amount detected in the method blank.

Samples were qualified "B" when specific compounds for an individual sample were detected in the specific canister blank check analysis and the sample result was within 5 times the blank results. This is to qualify the sample result as being potentially influenced from system background contamination.

The instrument was experiencing problems relating to the position of the transfer lines near the liquid nitrogen exhaust causing the transfer lines to cool and create active zones that interfered with compounds having higher boiling points. This problem was obvious in laboratory air and continuing calibration verification samples. The repositioning corrected the problem intermittently until the liquid nitrogen lines were plumbed and a full run could be completed. The higher 5 calibration levels were reanalyzed on the following workday with no samples being reported in between. The later calibration analyses replaced the prior not-acceptable calibrations samples in the calibration curve while keeping the earlier lower concentration calibration standard injections. Quality control samples were not acceptable having the same issue until the final repair was accomplished and all of the QC samples, ICV sample and the sample monitoring compounds did not exhibit signal loss. This quality assurance samples and sample monitoring compounds demonstrate that all data in this analysis was not affected.

The minimum reporting limit check is still not part of a standard operating procedure but it is analyzed using the same volume as the reruns, all with 20 ccs to supply added confidence that the system was functioning with the lower volume. The nominal reporting limit for this report is 25 pptv (0.025 ppbv) for most compounds except those that are raised for calibration and matrix interference problems. The MRL check was at 50 pptv. The reporting limits for a few compounds were reduced for the MRL to allow reporting with the LIMS. These compounds are ethanol, and isopropyl alcohol. Propene (and propene and propane + propene) initial reporting limits have been raised to 250 pptv (500 pptv adjusting for the 100 cc injection volume) because the calibration was acceptable only above that concentration.

Acrolein in sample 1708033-08 has a matrix interference that prohibits the identification of the compound at the reported result concentration and therefore the reporting limit is raised to the result concentration.

Reporting limits for the sample monitoring compounds have been lowered to below the set reporting limits and for 1,1,1-trichlorethane so have the detection limits. This has been done to allow reporting of the compounds to provide information on the quality of the sample processing. The acceptance values are known global concentrations that are taken to be accurate values.

Reporting and detection limits were lowered in samples 1708033-01, -06, -09 (ethanol), and -02 (isopropanol) to allow reporting from the diluted samples. These results are qualified "J" as estimated.

Propene and propane cannot be chromatographically and spectrally resolved by this analytical method. The samples contained both propene and propane in all the samples so the result for propene is reported as a combination of the two compounds. The results are estimated because there is no approved method for deconvolution the two compounds.

The -RE# samples have only 4 monitoring compounds because the other two (F-114 and 1,1,1-trichloroethane) are too low in concentration to be detected at the lower injection volumes.

The sample duplicate calculates and applies Q flags when the % difference is greater than the limits although it does not

**Notes and Definitions**

- R        Rejected  
MJ      Matrix interference  
J        The identification of the analyte is acceptable; the reported value is an estimate.  
B        Analyte concentration is < 5x that in the associated method blank(s); this concentration may be a high-bias estimate.  
(TUN)    Sample analysis occurred outside the tune check window stated in the SOP.  
U        Not Detected  
NR      Not Reported  
Q       QC limit Exceeded
